April 2018 v4

1. Check contents. Insert 1m extension into the top of main pole (label indicates right way up). Ensure the pole sections are firmly pushed together. (See Fig 1)

#### INSTALLATION

- 2a. For permanent installation, excavate a foundation, (see table for dimensions). Concrete the socket into place, use a level to check the socket is vertical and plumb sitting on the soil at the bottom of the hole and plumb checking at intervals as you infill the hole. **DO NOT SIT THE POLE ON CONCRETE.** Make sure there is minimum of 20mm and maximum of 100mm of socket left above ground. (see fig 2a)
- 2b. For a temporary installation use a ground auger and pack with sharp sand and soil to secure the ground socket, use a level to check the socket is vertical and plumb checking at intervals as you infill the hole. Make sure there is maximum of 20mm, and maximum of 100mm of socket left above ground. (see fig 2b)
3. Place the weight over the main pole. (see fig 3a)  
Ensure that the PTFE sheet lines the inside of the joint casing and the washer is in the bottom before connecting the curved tube with the joint to the end of the extension pole. (see fig 3b)
4. Slide the sleeve of the flag over the curved tube and down onto the main pole. (see fig 4)
5. Attach the weight onto the rope loop at the bottom of the flag. (see fig 5)
6. Insert the pole into the ground socket. (Two persons are recommended for erection process) (Make sure the arm and flag can rotate freely clear of obstacles). (see fig 6)
